ABSTRACT

This manual was developed as part of a cooperative project between the State Mistorical Society of Wisconsin and the Misconsin Division of Corrections' Green Bay Correctional Institution. As part of a new training program involving computers at Green Bay, the Director of Education approached the State Historical Society about developing a program appropriate to the training needs of the inmates that would also produce something of permanent value of the State. Based on the Society's extensive experience with the 1905 Wisconsin Census Indexing Project and the many developments in the area of automation initiated by the archives, the Society developed a project in which students would help to create a database listing and index of the 1880 Census for Wisconsin. In developing the program they hoped to create a model that would have wide applicability not only for other states and censuses but for historical demographic data in general. The manual comprises six sections: (1) Introduction; (2) The 1880 Census; (3) A Few Deficitions; (4) Using the Computer; (5) Census Data Entry; and (6) Hints for Solving Problems and Additional Information. Appendices include population totals for Wisconsin counties, 1880; population totals for towns, villages, and wards of cities, 1880; and a copy of the 1980 Census Program written in Applesoft BASIC, (THC)

* Reproductions supplied by EDRS are the best that can be made from the original document.

PREFACE

This manual was developed by the Wisconsin Center for Historical Demography as part of a unique cooperative project between the State Historical Society of Wisconsin and the Wisconsin Division of Corrections' Green Bay Correctional Institution. As part of a new training program involving computers at Green Bay, Phil Slinger, the Director of Education, approached the Society about developing a program appropriate to the training needs of the inmates but would also produce something of permanent value to the state. Based on the Society's extensive experience with the 1905 Wisconsin Census Indexing Project and the many developments in the area of automation initiated by the Archives, the Society created a plan to create a data base of the 1880 Census for Wisconsin. In developing our program our hope is to create a model, that will have wide applicability not only for other states and censuses but for historical demographic data in general. This document is a first step and we encourage anyone interested in this field to contact us,

1. INTRODUCTION

In this project you will use a computer to help create a data base (listing and index) of the 1880 Census of Wisconsin. You will be responsible for entering into the computer a wide variety of information, which will eventually be put together with the work of others to form the complete data base.

Why create a census data base?

The United States Federal Censuses are taken every ten years, as mandated by the Constitution. Originally their only purpose was to "count noses" for the purpose of calculating the number of people each state sent to the House of Representatives, since this is based on population. Gradually, however, the census came to be seen as a way to collect all sorts of useful information about people. The fact that the census is taken at the same time everywhere makes it possible to produce a "snapshot" of the entire country each decade.

Therefore, people who are researching their family trees; historians interested in the way people lived, the kinds of occupations they had, and the way they moved about; and demographers who compile statistical tables about people who lived long ago, all can find much of interest in a census. Ever since the censuses from 1790 to 1880 were released to the public a generation ago, they have been among the most-used of historical records. However, the census takers listed people in the order they visited them, and, especially in big cities, this makes finding a particular individual or family a matter of a long and boring search. Indexes which list the names alphabetically can therefore save much time and frustration. The information in a computerized data base can be sorted in virtually any way imaginable, and questions like "Where was my great-grandfather living in 1880?", "How many Norwegians lived in Milwaukee?", and "Who was the oldest living resident of Wisconsin in 1880?" can be answered almost instantaneously. (The census information is kept private for 72 years; the data collected in 1980 won't be released to the public until 2052.)

The first census was taken in 1790; it only listed the name of the head of the household, and the number of people living with him or her, divided into a few sex/age categories. By 1880, however, more than 25 types of information were listed about each person. The computer program you will be using was written so that you can, with a little practice, copy all this information quickly and accurately.

Aren't the pages of the 1880 census a little fragile by now?

Frankly, yes. That's why the entire census has been photographed onto microfilm (familiar to those who like spy novels). You will be given the use of a microfilm reader, which enlarges the image on the film so you can read it, and a roll of film with part of the 1880 census on it.

1

2. THE 1880 CENSUS

Before learning about the computer equipment, it would be a good idea to look at a page of the 1880 census, and get a feel for the kinds of information you will be recording.

In 1880, each county was divided in to several "enumeration districts." In the upper left-hand corner of each census page, you will see a line for "Enumeration Dict. No." followed by a written number. This number, and the name of the town and the county (after the words "Inhabitants in" at the top of the page) are what people need to know to find the general area of the census that a particular person was listed in.

Two lines above the enumeration district is the "Page No." Ignore this. The page numbers you will be entering into the computer are the ones stamped in ink (not written) in the upper right-hand corner of the page. Make a special note of this now; unfortunately, going back and correcting your computer entries, once you discover some are wrong, is a time-consuming and telious process.

Actually, this number stamped in ink is a sheet number: both the front and back of a sheet have the same number. The front and back are distinguished by a printed letter, A, B, C, or D, in the upper right- or left-hand corner of each page. (A's and C's are on the right; B's and D's are on the left: Please see for yourself). Sometimes the letters are faint, or covered with tape, but they are always there. If you can't find it, you can figure out what it must be by looking at the pages before and after.

Usually, the first sheet in a volume (stamped "1") is a sheet with an A and a B, the second sheet ("2") has a C and a D, etc. So the normal sequence of pages is: 1A, 1B, 2C, 2D, 3A, 3B, 4C, 4D, 5A, and so on. In other words, odd sheet numbers have A's and B's, and even sheet numbers have C's and D's. It would helpful if you get used to this system right away, so that when you sit down to enter the data, it will already be second nature and you can do it right, from the beginning.

In columns, on the far left and far right sides of the page, are the line numbers, 1 through 50. Each page starts over with line 1.

Now you can see that researchers, armed with the precise description of a location in the census (provided by you), can go directly to the exact line they want to see, even if they didn't know what county to look in before. You can also see the accuracy is very important here; if your "road map" directs the searcher to the wrong place, it won't matter if all the personal information you painstakingly recorded is correct or not. Fortunately, as you'll see, the computer takes care of most of the work.

8. A FEW DEFINITIONS

As with any occupation, computer data entry has its own language. Here are some words that are used frequently in the instructions that follow:

Disk - sometimes called "floppy disk" or "diskette", it looks like a thin, brown 45 rpm record tucked inside a protective jacket. (Be sure to follow the instructions on the jacket for handling the disk.) You will use two disks at a time: one contains the computer program you will be using, and the other will store the data you enter.

Disk drive or just drive - a sabinet-like device into which the disks are inserted, in order to read the information or instructions that are encoded on them. When disks are being used inside the disk drive they make a soft whirring sound as they spin. This is normal.

Files and filenames - a disk can be divided into files if there are severa! kinds of information on the same disk. Each file is given its own filename. Many files can go on the same disk, but in this project, there will be only one file on each disk; therefore the disk will have the same name as the file on it.

Record - all the information-about one census person. Each disk can hold up to 686 records.

Section - not really a "computer word," but used here to describe the three main groupings, of information within a record. Generally speaking, the first section contains general location; the second section specific location; and the third section personal information.

Field - the space set aside for each item of information you will record for each person. There are 32 fields per record in this project: 4 in the first section, 7 in the second section, and 21 in the third section.

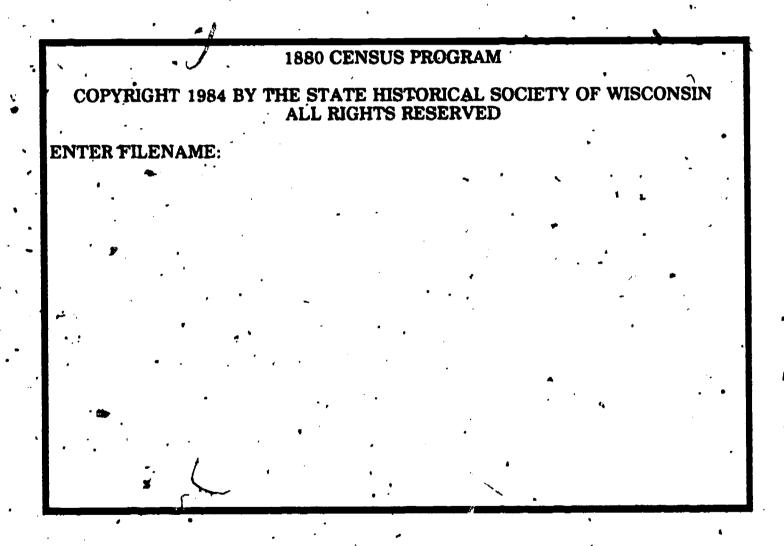

Monitor - the screen on which your work is displayed.

Cursor - a rectangle that shows you where you are on the screen.

4. USING THE COMPUTER

First set up the microfilm reader, and turn the reel to the first page you'll be indexing.

Your disk drive has two compartments, which should be labeled "Drive 1" and "Drive 2". To begin, insert the disk labeled "1880 Census Programs" in Drive 1, and close the door to the drive: (There are instructions on the disk jacket that will explain which way the disk goes in; it has to be a certain way or the program won't work). Insert your other disk in Drive 2, and close its door. Now turn the machine on (the switch is located on the back left of the keyboard unit). You will also need to turn the monitor on. Its switch is located above and to the right of the screen. After the disk stops spinning, the following will appear on your monitor:

At this point type in the filename and then press RETURN. If you are using a disk that already has some information stored on it, and you have forgotten your filename, type a question mark (?) to get the filename you used before. Make sure that you use the same filename each time you use the same disk.

After you type RETURN the computer will give you a chance to insert the disk into Drive 2 if you haven't already done so, and ask you to make sure that the CAPS LOCK key is in the down position.

1880 CENSUS PROGRAM

COPYRIGHT 1984 BY THE STATE HISTORICAL SOCIETY OF WISCONSIN ALL RIGHTS RESERVED

PLEASE MAKE SURE THAT < CAPS LOCK > IS DOWN

PLEASE INSERT FILENAME DISK IN DRIVE 2

OK TO CONTINUE (Y/N)?

When this is done type Y to tell the computer you are ready to continue.

If the file is a new one the computer will ask for a county code. (The computer program is set up to accept only a four-letter code for the names of the counties, not the whole name). Typing a question mark (?) will display the following fist of county codes:

ADAM	Adams
ASHL	Ashland
BARR	Barron
BAYF	Bayfield
BROW	Brown .
BUFF	Buffalo
BURN	Burnett
CALU	Calumet.
CHIP.	'Chippewa
CLAR	Clark
COLU	Columbia
CRAW	Crawford
DANE	Dane
DODG	Dodge
DOOR	Door
DOUG	Douglas
DUNN	Dunn'
EAUC-	Eau Claire
FOND	Fond du Lac
GRAN	Grant
GREE	Green

POLK	Polk
PORT	Portage
PRIC	Price

VERN Vernon RACI Racine RICH Richland WALW Walworth WASH Washington ROCK Rock Saint Croix WAUK Waukesha STCR WAUP. Waupaca SAUK Sauk SHAW Shawano WAUS Waushara WINN SHEB Sheboygan Winnebago Wood. TAYL WOOD Taylor TREM Trempealeau

You may enter the county code in small letters and the computer will capitalize it (though you won't see this on the screen). After you enter the county code and type RETURN the following screen will appear:

Wisconsin 1880 Census CODE County File FILENAME Record 1 Ward: Subdivision: Class: Enumeration District: Page: Line: Street Name: House #: Last Name: Dwelling #: Family #: Race: Sex: First Name(s): ' Age: Marital Status: Married Within Year: Relationship: Months Unemployed: Occupation: Blind: Deaf/Dumb: **Idiotic:** Illness: Cannot Write: Disabled: Attended Sch~ol: Cannot Read: Insane: Mother's Birthplace; Birthplace: Father's Birthplace: Auxiliary: Left arrow - Move left RETURN - Next field CONTROL-F - Next record CONTROL-B - Prev. record Right arrow - Move right TAB - Prev. field CONTROL-G - Goto record x CONTROL-A - Insert space Down arrow - Next sect. ? - Help DELETE - Del. character Up arrow - Prev. sect. CONTROL-C - Quit CONTROL-D - Delete to end of field

This is the screen on which all of your data entry will take place. He you are starting on a new disk, it should say "Record 1"; if you are working with an old disk, the last record from your previous session will appear. The records you enter are numbered automatically as you go.

When there is no more room on the disk, the computer will tell you "DISK FULL / PUT A NEW DISK IN DRIVE 2, TYPE ANY KEY WHEN READY." Be sure to get a new filename when you get a new disk. Once you have typed a key, it returns to the screen on page 4. Enter your new filename and proceed as before. The last record you entered on the old disk will become the first record on the new disk.

Ordinarily, you will move from one field to the next by typing RETURN. At the bottom of the screen is a list of various ways you can move the cursor from one place to another quickly, if you need to go back to make corrections. To use the functions with

the CONTROL key, hold CONTROL down while you type the letter (just like you hold SHIFT down on a typewriter to make a capital letter). Experiment with the various functions until you get used to them (review the definitions of "record," "section," and "field" in section 3 if needed).

TAB moves back one field at a time. Both the up arrow (†) and the down arrow (‡) move up or down, respectively, one section at a time. They both work in a circular fashion (i.e. typing the down arrow while in the last section moves the cursor to the first section.)

Simple typing errors can be corrected just by typing over the mistakes. If, for example, you typed Joens for Jones, just back up using the left arrow (+) and type me over the en. Typing the right arrow (+) will move the cursor forward if you backed up too far. If you typed Joes, you could type nes over the es. You could also position the cursor over the e, press CONTROL-A (in order to insert a space), and type n. If you typed Jonnes, position the cursor over one of the n's and press DELETE. Notice how the es automatically moves over after the n is deleted.

Move the cursor to the Last Name field and try the above "Jones" examples.

Using the <u>record</u> functions (CONTROL-F - next record, CONTROL-B - previous record, CONTROL-G - go to a record you specify) takes some time because the disk has to spin while it finds and displays the record you want. CONTROL-G allows you to go to any record on the disk, instead of moving backwards or forwards one record at a time. The computer will ask you for the number of the record you want; and you may have to guess a few times before you narrow it down.

Use GONTROL-L to delete the list of special functions at the bottom of the screen. Another CONTROL-L will make them reappear.

Each field has its own HELP message, which will explain briefly the sorts of things that are explained fully in this manual. Most questions you may have while typing will be answered in these messages. To get a HELP message, move the cursor to the field you have a question about, and type a question mark.

To end your session, type CONTROL-C. It is very important that you use <u>only</u> the CONTROL-C to end your session (don't just turn the machine off) because typing the CONTROL-C saves necessary information on the disk. You will then see the same screen that appears on page 4. To exit type CONTROL-C again and turn off both switches.

Any of the function keys can by typed in any field, and at any point within a field.

5. CENSUS DATA ENTRY

The computer program is set up to that a lot of the information that is the same from line to line in the census is automatically repeated on the screen. Once you type in the county name, community name, type of community, enumeration district, page number, street, house number, dwelling number, family number, and surname, these will remain constant until you change them. In addition the line number will automatically increase by one each time you start a new record.

In the Subdivision field enter the name of the community only. Do not include the <u>type</u> of community like City, Town, Township, or Village.

In the Class field enter the type of the community, using the following codes:

C - City

T - Town/Township

V - Village

In the Enumeration District field enter the Enumeration Dist. No. located at the top of the census page.

In the Ward field enter the name of the ward. Usually only the larger cities are divided into wards. This field will be blank when indexing rural areas. Wards will usually be numbered, but sometimes words will be used. Use a maximum of two characters to name a ward. If it says "East" enter "E", if "Southwest" enter "SW". See appendix B for a list of cities divided into wards.

In the Page field enter the page number. Do not enter the manuscript Page No. written in by the census taker. Enter the sheet number stamped in ink followed by the capital letter in the corner of the page. You may enter a small letter and the computer will capitalize it.

In the Line field enter the line number. As explained above, this will automatically increase by one, but you must remember to adjust this if the census taker left a blank line.

In the Street, Name field enter the name of the street including the direction. For example: Enter "East Main St." not just "Main St." The street name is written, if at all, vertically in the leftmost column of the census page. Leave blank if there is no street name given.

In the House # field enter the house number. (Not all named streets had numbered houses.) Use "H" to mean "1/2"; for example, if it says "7454 1/2" enter "7454H".

In the Dwelling # field enter the dwelling number from column 1.

In the Family # field enter the family number from column 2.

In the Li ne field enter the surname from column 3. Often a new last name will be shor the previous one. A fast way to delete the remaining characters, once you've t, new name, is to type CONTROL-D.

8

Enter last names beginning with Mc or Mac all in capitals with no spaces, and enter names beginning with O' without the apostrophe. Examples:

enter McDonald or Mc Donald as MCDONALD; enter O'Brian or OBrian or Obrian as OBRIAN.

In the First Name(s) field enter the first name and middle initial(s) or name(s) from column 3. If the name is abbreviated (Chas.) you can spell it out (Charles) if you're sure what the abbreviation means. If in doubt, just type what it says. "Jno." is an old-fashioned abbreviation for "John". Do not enter periods after initials.

In the Race field enter color/race from column 4 according to the following codes:

W - White

B - Black

M - Mulatto (part black and part white)

C - Chinese

I - Indian/Native American

You can leave this field blank if the person is white, and the computer will automatically enter a "W" (although you won't see this on the screen).

In the Sex field enter sex of person from column 5 according to the following codes:

M - Male

F - Female

In the Age wild enter age from column 6. Enter ages less than a year as the letter "M" followed by the number of months. Ignore the months if over one year. Examples: If it says "7/12" you enter "M7"; if it says ",1 9/12" you enter "1". Enter ages less than one month as "M0". You may type in a small "m" and the computer will capitalize it.

In the Relationship field enter the relationship to the head from column 8. Leave blank if it says "Head" or is blank. Use the following codes:

ADA	Adopted Daughter	GĠS	Great-Grandson
ASN	Adopted Son	HUS	Husband
ANT	Aunt	INM	Inmate
BOA	Boarder	MOT	Mother
BRO	Brother	MOL	Mother-in-Law
BRL	Brother-in-Law	NEP	Nephew
COU	Cousin	NIE	Niece
DAU	Daughter	OTH	Other/Unknown
DAL	Daughter-in-Law	ROO	'Roomer
FAT	Father	SER	Servant
FAL	Father-in-Law	SIS	Sister
GAT	Grand-Aunt	SIL	Sister-in-Law
GDA	Granddaughter	SON	Son
GFA	Grandfather	SOL	Son-in-Law
GMA	Grandmother	SDA	Stepdaughter
GNP	Grand-Nephew	SFA	Stepfather
GNI	Grand-Niece	SMA	Stepmother
GSN	Grandson	SSN	Stepson
GUC	Grand-Uncle	UNC	Uncle
GGD	Great-Granddaughter	. WIF	Wife
GGF	Great-Grandfather	WOR	Worker
GGM	Great-Grandmother		
•			-

In the Marital Status field enter the marital status from columns 9-11 using the following codes:

S - Single

M - Married

W - Widowed

D - Divorced

Blank , Nore given

If the marital status of a person under 16 years old is not given, assume they are single. A mark in the widowed/divorced column means widowed; a capital D means divorced.

In the Married Within Year field indicate if married within the census year from column 12 using the following codes:

Y - Yes

N or Blank - No

In the Occupation field enter the occupation from column 13. Omit the following occupations: At school, At home, Keeping house, Housekeeper, and Boarder (unless listed as "servant," in the relationship column). Leave blank if blank in census.

In the Months Unemployed field enter number of months unemployed from column 14. Leave blank if blank in census.

In the Illness field enter illness from column 15. Leave blank if blank in census.

In the Blind field indicate if blind from column 16 using the following codes:

Y - Yes

N or Blank - No

In the Deaf/Dumb field indicate if deaf/dumb from column 17 using the following codes:

· Y - Yes

N or Blank - No

In the Idiotic field indicate if idiotic from column 18 using the following codes:

Y - Yes

· N or Blank - No

In the Insane field indicate if insane from column 19 using the following codes:

Y - Yes

N or Blank - No

In the Disabled field indicate if disabled from column 20 using the following codes:

Y - Yes

N or Blank - No

In the Attended School field indicate if attended school during census year from column 21 using the following codes:

Y - Yes

N or Blank - No

In the Cannot Read field indicate if unable to read from column 22 using the following codes:

Y - Yes

N or Blank - No

In the Cannot Write field indicate if mable to write from column 23 using the following codes:

Y - Yes

N or Blank - No

Birthplaces are coded with two letters for places within the United States and with three letters for foreign places. Sometimes the birthplaces are abbreviated, and so it will be up to you to figure them out as best you can. In addition Germany was, in the 19th century, divided into many small, semi-independent states. Each of these has its own code and it would be a good idea to read over the list below before you start to index. If the birthplace is not on the lists below, or is unreadable, enter "XXX". If the birthplace is Wisconsin, you can leave the field blank.

In the Birthplace, Father's Birthplace, and Mother's Birthplace fields enter the places of birth from columns.24, 25, and 26 using the following codes:

6. HINTS FOR SOLVING PROBLEMS AND ADDITIONAL INFORMATION

Problems:

There are several types of problems that may crop up: Accidentally turning the machine off while you are still running the program, a power failure, or the program aborting for some reason (see next paragraph). As mentioned before, typing CONTROL-C causes the computer to first put necessary information on the disk about the file before quitting. If the program is stopped in any unusual way, it will not have a chance to put that information on the disk. So if you tried to run it again with the same disk it may appear that all your hard work has just vanished finto oblivion. However, there is good news: in most cases, all will not be lost. While you are at the screen pictured on page 4, type CONTROL-C. Then, at the Applesoft prompt, which is the right square bracket () type RUN FIX, D1 followed by a RETURN. When the computer asks "ENTER DATA FILENAME:" enter your filename followed by a RETURN. The computer will then look at your file and fix it if at all possible.

Should the program come across an error situation that it can't recover from, it will say "ERROR e IN LINE n / UNABLE TO CONTINUE, PROGRAM ABORTED", where "e" is the error number and "n" is the line it occurred in. Make a note of both the error and line numbers and what you had been doing before the error happened. Give this information to Phil Slinger to send to Madison so that we can fix the program so that it won't happen again. You may then run the census program again (see next paragraph).

Additional information:

The program can be rerun without turning the computer off and then back on. If you have typed CONTROL-C twice to get out of the program and then wish to run it again, at the Applesoft prompt (]) just type RUN followed by a RETURN. If you have been using some other program like "DISPLAY" or "FIX", you will have to type RUN CENSUS, D1 followed by a RETURM.

There is a speedy way to look a a condensed version of the information on the disk. To do this type in at the Applesoft prompt RUN DISPLAY, D1. When the computer asks "ENTER DATA FILENAME:" enter the filename. It will then ask you "ENTER RECORD TO START WITH:" and "ENTER NUMBER OF RECORDS TO DISPLAY:". Once you have entered the record number to start with and the number of records to display, the computer will display them, breaking each record up into three lines. Each line will be prefixed with its record number, a priod, and a one, two, or three. The number following the period tells which third of the record is on that line. Use CONTROL-S to temporarily stop the display. Another CONTROL-S will start it up again.
